

Journey Experience Concept

1. What focused brand experience or interaction are you designing for?

We are designing an interactive educational experience that focuses on storytelling. Rather than directing users immediately to products, the experience encourages them to discover Singapore batik through engaging content, artisan stories, interactive learning activities, and rewards before exploring Heritage Bay's product collection. This transforms the website from a conventional online store into an immersive cultural journey.

2. What problem or opportunity are you addressing?

Many younger consumers have limited awareness of Singapore batik and may perceive handcrafted batik products as expensive without understanding the cultural heritage, craftsmanship, and value behind them. As a result, they lack confidence in purchasing authentic batik products.

This presents an opportunity to educate users through digital storytelling, allowing them to build an emotional connection with the artisans and appreciate the craftsmanship before making a purchase decision. By increasing understanding and trust, Heritage Bay can encourage stronger engagement, higher purchase confidence, and long-term brand advocacy not just for targeted customers but also send a good impression onto potential artisans to collaborate with.

3. How does this align with Heritage Bay's brand?

Heritage Bay aims to preserve and promote Singapore's batik heritage while supporting local artisans through authentic handcrafted products. The proposed experience reinforces this mission by placing cultural education and artisan storytelling at the centre of the customer journey. Interactive elements such as the Batik Journey, motif collection, artisan profiles, and reward system reflect Heritage Bay's commitment to celebrating heritage while presenting it in a modern, engaging, and accessible digital experience for younger audiences.

4. What insight or strategic perspective informs this approach?

Research indicates that younger consumers are more likely to engage with interactive, visually driven, and story-led digital experiences than static informational websites. They also place greater value on authenticity, transparency, and purpose-driven brands when making purchasing decisions.

Rather than relying solely on product information, this experience adopts a storytelling-first strategy. By educating users about batik's history, cultural significance, and the artisans behind each product, the website builds trust and perceived value before introducing products. This approach shifts users from simply browsing for clothing to appreciating the heritage and craftsmanship behind each purchase, making them more likely to support Heritage Bay and advocate for its mission.

The proposed experience transforms Heritage Bay's website into an interactive storytelling journey that educates, engages, and inspires users to appreciate Singapore's batik heritage, fostering trust, purchase confidence, and long-term advocacy for local artisans.
