

Rationale

The brand experience is designed on a mobile format as I intend to give users an experience that is accessible and easy to navigate with, with as little barriers as possible. The layout is simple and organised, without too much clutter of elements, so that the user can just focus on interacting with the UI.

Compared to the brand's website, I introduced rounded edges to all UI elements and interactive buttons. It makes the overall interface feel softer and more comfortable on the eyes than sharp corners.

The second screen of the prototype is the styling ideas screen, inspired by the Pinterest board layout. It allows users to scroll for styling inspiration featuring HB's clothing pieces. Once they have found the piece they are interested in, they can click in for information on the product, and browse through the carousel for more pictures of the clothing piece.

The AI Fitting Room page is designed in a way that is easy to use. All the user needs to do is to upload a photo of themselves and generate their look, rather than answer multiple prompts given by a chatbot.

For the colour choice, I decided to adopt the colours of the deck of slides Heritage Bay sent, which is an off-white colour (#F8F6F3) for the background, and brown (#493622) as the accent colour. In their brand guide, it is mentioned that their visual style lean towards retro and cinematic, so having these colours paired with black as the boarder, would complement this style.

The font used throughout is Avenir Next; SF Pro is only used for ios applications. I also noticed that the letter spacing of HB's fonts are tighter. I decided to reduce the letter spacing of headers and button text by 5% for to keep their style constant, while leaving the spacing untouched for text paragraphs and other supplementary information for readability.
